Reference: Negash, S. (2004) Business Intelligence, Communications of the AIS, 13(1) pp. 177-195.

(4) Data Driven Decision - refers to decisions taken after full data analysis was conducted
Example: Multi-choice taking decisions on ads after Rofhiwa conducted the analysis and has dashboards.

(5). Big Data - Refers to large complex datasets that has lots of rows and columns and requires advanced tools for processing.
Example: Meta process millions of users' interactions daily
Reference: Marr, B. (2016) Big Data practice. Wiley.

(6) Descriptive analytics: the process of using historical data to study what happened to end up being at a certain point or achieving certain results.
Example: Khutso using historical stock price data and macroeconomic factors to study how the increase of interest rates affect stock prices.
Reference: - Sharda, R. et al (2020).

(7) Diagnostic Analytics - refers to the process of examining data to determine why something happened.
Example: Analysing why people dropped out of Bright Learn in data Science class.
References - Alpaydin, E (2020) Introduction to Machine Learning. MIT Press.

(8). Predictive Analytics: the process of using things like machine learning to predict future outcomes of certain things.
Example: Quantitive analyst using regression model or Lgboost model to predict price movements.
Reference: Siegel, E. (2026) Predictive Analytics. Wiley.

(9). Prescriptive Analytics: the process of recommending certain actions to achieve desired outcomes based on data analysis.
Example: Traders optimizing trades patterns and volumes to determine when to trade and reduces costs of trading.
Reference: Davenport, T.H. (2014) Big Data at Work. Havard Business Review Press.

(10) Data Literacy - This is process of teaching, being able to read, analyze, understand and communicate data to people who can't even read it and who can read it effectively.
Example: Rofhiwa in class teaching dashboards reports to everyone who has experience and doesn't have experience.
Reference: Wolff A. et al (2016) Creating an understanding of data literacy, Journal of Community Informatics, 12(3).

SECTION B

DATA MEASURING AND REPORTING

(11) Structured Data - Data that has order, ~~was~~ organized and stored in a formal format, typically in database.

Example: Matric results stored according to Schools, regions, provices in databases.

Reference: Kitchin, R. (2014) The data Revolution. Sage.

(12) Unstructured data - this is data that has no order, or follow a certain formal pattern. The dataset is difficult, complex and hard to analyse.

Examples. Emails, videos, Social media post and photos.

Reference: Nemukula, R. (2026). Databases Class. BrightLearn Portal.

(13) Data Warehouse. this is a central place where we store multiple databases using ETL and ELT process to clean, prepare, and organise data to be usable by data Scientists or data analysts.

Example. McDonalds using different databases and store intergrated data across the country in a data warehouse to analyse, ~~what gender~~ different datasets on segments, age and other factors.

Reference - Inmon, W.H. (2005) Building the Data Warehouse. Wiley.

(14) Data Mining: this is the process of identifying different patterns, their relationship with others in large datasets.

Example: Chicks identifying if women buy pads with tampons together most of the times or what.

(15) Data Visualization: this is what data analysts uses tools like power BI to display graphs, Charts and trends to communicate insights.
Example: Charts and graphs showing asset allocations, manager performances, Stock performance and Stock trends.

(16) Dashboards - these are the results of data visualizations that display key information and metrics monitoring performance of companies.
Examples: Company dashboard displaying Sales, growth, Expense reductions, Stock price growth, and profit growth.

(17.) Metric: - these are numerical measures quantifiable, used by companies to track performance, Sales growth, progress of the Company, and how healthy are financial Statements.
Example: Financial Metrics like, Net profit Margins, operating Cashflow, Gross profit Margin, EBITDA growth, Return on Investments and Return on Equity.
Reference: Parmenter, D. (2015) key Performance Indicators. Wiley,

(18). Key Performance Indicator (KPI) - this is a critical company metric normally used when companies give bonuses and annual increases.
- Companies uses this metric to measure the Stregth and weakness of the company against its peers.
Example - Old Mutual using KPI to assess annual performance bonuses for employees.

19. Benchmark - this is a Standard reference point that the companies or portfolio managers use to compare against performance.
- In asset management, we use Benchmarks to measure if the manage inhouse fund can beat its benchmark.
Example - BlackRock using MSCI WORLD Index to measure if their enhanced strategies can beat the benchmark.
- Clicks comparing itself performance with other retailers (like Dischem) average.
Reference. - Camp, R.C. (1989 Benchmarking. ASQC Quality Press

(20) Segmentation - this is process where market is divided in small segments or characteristics of their own group. Target market is divided according to character.
Example - Target market divided according to their income, gender or age.
Reference: Kotler P. and Keller K.L. (2016) Mark Management. Pearson.

SECTION C - CUSTOMER AND SALES KPI

(21) Conversion Rate - This is a percentage of visitors who take action against the number of visitors to a certain store.
- In Soccer is number of goals scored against the number of Shots by players.

Example - If Barcelona total Shots is 10 in a game and they score 3 goals, then the Conversion rate is 30%.

Reference - Chaffey, D. et-al (2019) Digital Marketing. 7th edn. Pearson.

(22) Customer Acquisition Cost - this is a total cost of acquiring a customer including all the costs. The costs includes marketing, branding, sales expenses and other operating expenses.

Example - If Pick n' pay Spend R20 000 trying to get Customers and 200 Customers the CAC = R100

Reference: Kotler, P. and Keller K, L. (2016) Marketing Management. 15th edn - Pearson

23 Customer Lifetime Value - this is the total revenue the company expects from its relationship with different Customers.

Example - If Khutso Spends R2500 on groceries every month at Checkers, then his Yearly CLV is R2500 x 12 = R30 000 depends on number of years he buys at checkers until he moves on to Woolworths.

Reference - Kumar, V. (2018) Customer Relationship Management. Springer.

(24) - Churn rate - this is percentage of Customers who move on from a product or service for different reasons. Could be treatment or product is obsolete.

Example - When people move on from BrightLearn because Rofhiwa is giving them lots of Assignments to Coursera. If 340 people leave BrightLearn out of 350 Students - Churn rate = 340/350 = 97.14%

Reference - Farris, P.W et.al. (2010) Marketing Metrics. Pearson.

(25) - Customer Retention Rate - this is the Percentage of Students or Customers stay for different reasons.

Example - Students who remains with BrightLearn if 10 Students remain out of 350 then CRR = 10/350 = 2.8%

(26) Average order Value - this refers to the average amount Spent per transaction

Example - If Sales amount to R10000 and the has been 100 transactions, the AOV = R10000/100 = R100.

Reference - Chaffey, D. (2015) Digital Business and E-Commerce Management. Pearson

(27) Net Promoter Score - Word of mouth Metric that measures Customer loyalty and if Customers will recommend the product or Service.

Example. likelyhood of Students recommending BrightLearn to their peers.

(28) Sales funnel - this is the process that the customers go through from the day they are aware of the product until they buy a product.
Example - Khutso became aware of BrightLearn in June 2025 but registered in April 2026.
Reference - Kotler, P. et-al. (2017) Marketing 4.0 Wiley.

SECTION D

(29). Marketing Campaign - marketing activities that are aimed at making customers aware of a certain product or service.
Example - 27four Investment Managers holding a campaign to promote Beta Solutions Strategies

(30). Post Campaign Analysis - Evaluating how marketing campaign performed and if benchmark was outperformed or underperformed.
Example - Measuring asset under management of Beta Solutions Strategies growth after the Campaign.

(31) Incremental Revenue - this is the revenue generated from the campaign or investor day done by a business.
Example - Measuring revenue made after AUM was recieved by 27four after Campaign held. If the business generated R20M then now its generating R25m. then incremetal revenue is R25m - R20m = R5m.
Reference - Farris, P.W et-al. (2010) Marketing Metrics. Pearson.

(32). Return on Investment - it is a financial Metric used to calculate how much was generated from the investment that was made.
Example - If Khutso invested R1000 into a property investment and at the ~~end of~~ investment earns R500 to total R1500 then.
ROI = $\frac{500}{1000} \times 100 = 50\%$

(33) Return on Ad Spend - this is the revenue generated from advertising only.
Example - Spend R1000 on advertisement then generate R2000 then ROAS = 2:1
Reference - Chaffey, D. (2019) Digital Marketing. Pearson

(34). Click-Through Rate (CTR) - this is the number of people who click on an advert after liking it over the number of people who saw the advert. Some dont click the ad.
Example - If 1 person clicks on Woolworths Ad out of 5 people who saw it. then CTR = 1/5 = 20%.
Reference - Ryan, D. (2016) Understanding Digital Marketing. Kogan Page.

(35). Bounce Rate - This is the number of of People who leave a website after view once of one page and not be interested on others Over People who view Website pages.
Example - If 20 visitors leave imideatly after visiting online shopping website out of 200 visitors the Bounce Rate = 20/200 = 10%

(36) A/B Testing - this is the method of Comparing two webpages and decide which one performs better or testing if course on a certain platform is better than the other.
Example - testing if udemy is better than BrightLearn.
Reference - Kohavi, R et-al. (2020) Trusting Online Controlled Experiements. Cambridge university Press.

(37) Lead Generation - this is the process of attracting customers and capturing potential customers' interest for future buy of product or service.
Example - Cologne testing at malls to create awareness and attraction of Customers' interest for future buy. or

(38) Marketing Attribution - process of determining which form of marketing gets credit due to a certain buy after customers seen an Ad.
Example - Woolworths crediting Ticktok for certain purchases in the business.
Reference - Li, H. and Kannan, P.K (2014) Attributing modeling, Journal of Marketing Research, 51 (1).
